1. Connector Activation

- Login on <https://www.adiabax.it> (MY ACCOUNT)
- Click on SHOPADVARICS LICENSE button
- Test license is automatically generated
- Click on SETTINGS button to start connector configuration.

2. Shopify – Advarics connector configuration

2.1 Advarics Settings

IMPORTANT: Only those articles are exported that are marked as **WebShop articles** in Advarics. With a **trial license only 10 articles** are synchronized.

To use the connector with your own data, you need the **Advarics Service-Id** and the **Advarics-API-URL**, both available from Advarics.

- **Advarics Service-Id** (example abcdefgh-1234-ijkl-5678-mnopqrstuvwx)
- **Advarics-API-URL**, z.B. <https://yourshop.advarics.net/external/WebShop/>
 - **IMPORTANT:** insert full path including http:// or https:// and final slash
- **Advarics Webshop-ID** and **Advarics Webshop-Filiale** (values defined in Advarics WebShop configuration page)

2.2 Shopify Settings

The following section contains the Shopify Private APP settings needed to extend your WebShop to the merchandise management system Advarics. To activate the Adiabax Connector you need to first enable the private app development setting in your Shopify admin; by default, this setting is deactivated.

To enable the app please use following instructions:
<https://help.shopify.com/en/manual/apps/private-apps>

Adiabax can support you in this task; in order to manage this activity, a user with administrator role must be assigned to Adiabax Support.

After you have enabled private app development from the Shopify admin, you need to insert the generated credentials.

- **Shopify Shop name:** the URL of the Shopify Webshop (example: yourshopname.myshopify.com/)
- **Shopify API Key:** api key generated during private app configuration (alphanumeric)
- **Shopify APP password:** api password (alphanumeric starting with shppa_)
- **Shopify Shared Secret:** api shared secret code (alphanumeric starting with shpss_)

2.3 Product Settings

Decide if a new product has to be loaded in **draft** or directly **published** on the WebShop

New product status Draft Published

Define the **master data system**; if Advarics, the information is always overwritten, otherwise information is only uploaded from Advarics for new products and then maintained in the WebShop (stock is of course always synchronized).

Synchronization mode for Title, Excerpt and Content Exclusively on product creation Always (Advarics master)

Compose the **title** of the product in the WebShop choosing available values from the combobox. Example brand - articleName – articleNo

Product Name	<input type="text" value="brand"/>
	<input type="text" value="articleName"/>
	<input type="text" value="articleNo"/>

There are 3 categorization types available

- Advarics WebShop categories (WebShop-Kategorie 1, WebShop-Kategorie 2, WebShop-Kategorie 3)
- Advarics WebShop categories but only during product creation (the category will not be synchronized after first upload)
- category managed directly in Shopify (not overwritten by synchronization)

Product Category	<input checked="" type="radio"/> Advarics WebShop categories (webShopCategory1,2 and 3)
	<input type="radio"/> Advarics WebShop categories imported only during product creation (webShopCategory1,2 and 3)
	<input type="radio"/> Categories managed directly in WooCommerce - No synch

Advarics categories will be loaded as Shopify Product Tags.

Collections have to be created manually on Shopify adding tags as condition filters.

Define if product images should be downloaded from Advarics or added in Shopify

Product Images	<input type="radio"/> No pics synchronization (added in Shopify) <input checked="" type="radio"/> Synchronized with Advarics
----------------	--

2.4 WebShop synchronization

Synchronisation method: Choose between a **differential approach** (downloads only changed records since last synchronization) and **Forced update** (downloads all products marked as WebShop articles, insert new and updated existing products and variants).

The **last update** can be changed manually to retrieve changes from a certain date onwards (Save settings before synchronizing)

Synchronization method Update changed records only Force update

Sync from (default last update)

Product to synchronize: Decide to download all products or a single one using the Advarcis GTIN as filter

Product to synchronize All products Single GTIN

IMPORTANT: Save settings before synchronizing when you switch from all to single product.

2.5 WebShop Order

Decide if orders should be sent in real time to Advarics or if you prefer that order stops on the WebShop (especially for testing purposes)

Order propagation

Order stops on Shopify Send order to Advarics

2.6 Synchronization scheduling

It is possible to **plan the synchronization** between Advarics and the WebShop

Choose Advarics-Shopify synchronization interval (disable if the synchronization is only manually).

Interval

Disabled 10 min 30 min

Always save after setting changes

3. Manual Synchronisation

Articles can be synchronized manually (recommended during the test phase)

Click "**Synch now**" button to synchronize products with Advarcis

ACTIONS	Manual synchronization	SYNCH NOW
---------	------------------------	-----------

4. Support

For support please contact us at the following email address support@adiabax.it
